

Alphabetical list of element names (and their symbols) LEARN BOTH in TEXT pages 896-97 BY SEP. 8

Element names are NOT capitalized, but symbols MUST start with a capital letter and the second letter is always LOWER CASE.

Name	Symbol	Name	Symbol
actinium	Ac	magnesium	Mg
aluminum		manganese	
antimony		mercury	Hg
argon		neon	
arsenic		nickel	
astatine		nitrogen	
barium		oxygen	
beryllium		phosphorus	
bismuth		platinum	
boron	B	potassium	
bromine		radium	
cadmium		radon	
calcium		rubidium	
carbon		selenium	
cerium		silicon	Si
cesium		silver	
chlorine		sodium	
chromium		strontium	
cobalt		sulfur	
copper		tellurium	
fluorine		thallium	
francium		tin	
gold		titanium	
helium	He	tungsten	
hydrogen		uranium	
iodine		xenon	
iron		zinc	Zn
krypton			
lead			
lanthanum			
lithium		petschelium (tee hee)	☺

There are 58 elements to memorize so if you do 5 per DAY you will be ready for the QUIZ on Monday SEP. 10. This will be a major grade so PRACTICE BY writing them out EACH day as you study your 5 per day. Do this with a friend or family member. Do not leave it until two or three nights before the quiz. You will only be given one quiz and it will be worth 58 points. A great score to start with in the course. **They will be mixed randomly on the actual quiz and you will need to know BOTH the symbol if given the name and the name if given the symbol.**
